

EfficientAD Verification + Proposed Idea (DCC) — 1-page Report

Baseline vs DCC (Image AUROC + optional Pixel metrics)

dataset	subdataset	model_size	train_steps	penalty	image_auc_baseline	image_auc_dcc	delta	dcc_k	dcc_pool	dcc_weight	pixel_auc_baseline	upro_baseline	pixel_auc_dcc	upro_dcc
mvtec_ad	bottle	medium	1000	True	96.587	97.778	1.19	128	2	0.20.949400678	0.0628796247965080898	0.063598346		
mvtec_loc	breakfast_b	medium	1000	True	67.981	68.259	0.278	128	2	0.2	nan	0.0	nan	0.0

- Notes:
- image_auc_* are computed from max(anomaly_map) per image.
 - Pixel metrics are sampled/approx to stay memory-safe; they become reliable only if masks are detected.
 - LOCO provides pixel-precise ground truth masks and defects_config.json (official dataset docs).
